Quick Summary:

$$
\begin{aligned}
\text { Work } & =\lim _{n \rightarrow \infty} \sum_{i=1}^{n}(F O R C E)(D I S T) \\
& =\int_{a}^{b}(F O R C E)(D I S T)
\end{aligned}
$$

Problem type 1: (Leaky bucket/spring)
FORCE $=f\left(x_{i}\right), \quad$ DISTANCE $=\Delta x$,
Problem type 2: (Chain/pumping)
FORCE $=$ weight of each horizontal slice
DISTANCE = distance moved by a slice
For a chain, we have
$k$ = density $=$ force per distance
FORCE $=$ weight of slice $=k \Delta x$
DISTANCE $=$ distance moved by slice
For pumping, we have
$k=$ weight per volume
FORCE $=k$ (area of horiz. slice) $\Delta y$
DISTANCE = distance moved by slice

Some unit facts:

|  | Metric | Standard |
| :--- | :--- | :--- |
| Mass | kg |  |
| Accel. | $9.8 \mathrm{~m} / \mathrm{s}^{2}$ | $32 \mathrm{ft} / \mathrm{s}^{2}$ |
| Force | Newtons <br> $\mathrm{N}=\mathrm{kg} \cdot \mathrm{m} / \mathrm{s}^{2}$ | pounds <br> $=\mathrm{lbs}$ |
| Dist. | $\mathrm{m}=\mathrm{meters}$ | $\mathrm{ft}=$ feet |
| Work | Joules <br> $\mathrm{J}=\mathrm{N} \cdot \mathrm{m}$ | foot-pounds <br> $\mathrm{ft} \cdot \mathrm{lbs}$ |

$\mathrm{g}=$ grams, in = inches, $\mathrm{yd}=$ yards, $\mathrm{mi}=$ miles
$1000 \mathrm{~g}=1 \mathrm{~kg}$
$100 \mathrm{~cm}=1$ meter
12 inches = 1 foot
3 feet = 1 yard
$5280 \mathrm{ft}=1$ mile
Density of water $=1000 \mathrm{~kg} / \mathrm{m}^{3}=9800 \mathrm{~N} / \mathrm{m}^{3}$

$$
=62.5 \mathrm{lbs} / \mathrm{ft}^{3}
$$

## Review: Particular scenarios

Type 1 Problems:

$$
\text { FORCE }=f\left(x_{i}\right) \text {, DISTANCE }=\Delta x
$$

1. HW 4A/1, 2, 8, 9 and HW 4C/1

Given force, just need to integrate!

$$
\text { Work }=\int_{a}^{b} f(x) d x
$$

2. HW 4A/3, 4 (Springs)
(i) Covert all to meters
(ii) Label natural length, $L$, and note that $L$ corresponds to $x=0$.

$$
\begin{aligned}
& \text { Force }=\mathrm{f}(\mathrm{x})=\mathrm{kx} \\
& \text { Work }=\int_{a}^{b} k x d x
\end{aligned}
$$

Step 1: Find k
Step 2: Answer question.

Type 2 Problems:
FORCE = weight of a horizontal slice, DISTANCE = distance to top
3. HW 4A/5 and HW 4C/2 (Chain)
(i) $\mathrm{k}=$ density of chain = weight/dist
(ii) FORCE at a subdivision $=k \Delta x$
(iii) Label top $x=0$, then DIST $=x_{i}$.

$$
\text { Work }=\int_{a}^{b} x k d x
$$

4. HW 4A/6,7 and HW 4C/3 (Pumping) Water density $=9800 \mathrm{~N} / \mathrm{m}^{3}=62.5 \mathrm{lbs} / \mathrm{ft}^{3}$
(i) Label (put in xy-plane)
(ii) Draw a horizontal slice and find a formula for its area.
(iii) FORCE $=($ Density $)($ Area $) \Delta y$
(iv) DIST = distance to top

Work $=\int_{a}^{b}($ Dist $)($ Density $)($ Area $) \mathrm{dy}$
