To Agnieszka, my wife

Preface

Do you believe that two and two makes four? Yes? Then why? You may reply that “It works” or “Everyone knows that $2 + 2 = 4$.” Both answers are perfectly reasonable. We need this kind of attitude in everyday life. Any reasoning more formal than that would paralyze our normal activities. But the two common sense answers completely fail in some situations. This book is devoted to one of these situations — the philosophical controversy surrounding the concept of probability.

The philosophy of probability has several major branches, the best known of which are frequency and subjective. These two philosophies are (mistakenly) associated with the two main branches of statistics — frequency and Bayesian. The temperature of the intellectual dispute concerning the meaning and applications of probability has been high in both philosophy and statistics.

Why did philosophers and statisticians fail to check what “works?” They did not. They checked and they know very well what works except that representatives of each side of the dispute swear that their own methods “work” and those of their opponents do not. This controversy shows that we have to try to understand the sources of our knowledge at a level deeper than “It works” — this is what this book is about. My previous book, “The search for certainty,” [Burdzy (2009)] codified the scientific laws of probability. All I did was to formalize what was already present in probability and statistics textbooks. In this volume, I will try to supply epistemological foundations for probability. One particular philosophical idea provides a strong motivation for my analysis — the idea that probability is subjective. In the previous book, I showed that the interpretation of subjectivism advocated by Bruno de Finetti made no sense whatsoever. But the subjectivist current in philosophy of probability

is not limited to the extravagant theory of de Finetti and it deserves an honest analysis. Contrary to the popular belief, de Finetti was an antisubjectivist because he denied any value to subjective probabilistic opinions. Paradoxically, my epistemological analysis of personal knowledge (I borrowed this phrase from [Polanyi (1958)]) will make me more of a subjectivist than I ever expected or wanted to be.

I will base my epistemology on the concept of “resonance,” loosely related to its namesake in physics. I will use resonance in my analysis of the philosophical problem of induction. I will also briefly analyze three other well known philosophical problems of consciousness, intelligence and free will. It is not my intention to present detailed explanations for these phenomena but to propose a small set of ideas that will remove the mystery out of these seemingly incomprehensible aspects of human intellect. Going back to the original motivation for this project, I will use this epistemology to outline my opinions about the apparent subjectivity of probability.

I imported much of the discussion of philosophy of probability and its relationship to statistics from [Burdzy (2009)] but I changed the presentation of that material and I put it in a new context — that of the epistemological ideas developed in this volume.

I am grateful to people who offered their comments on [Burdzy (2009)] or the draft of this manuscript and thus helped me improve the book: Itai Benjamini, Erik Björnemo, Nicolas Bouleau, Arthur Fine, Adrew Gelman, Artur Grabowski, Peter Hoff, Wilfrid Kendall, Vlada Limic, Dan Osborn, Jeffrey Rosenthal, Jaime San Martin, Jim Pitman, Christian Robert, Pedro Terán, John Walsh, Larry Wasserman and anonymous referees.

Special thanks go to Janina Burdzy, my mother and a probabilist, for teaching me combinatorial probability 40 years ago. The lesson about the fundamental role of symmetry in probability was never forgotten.

I am grateful to Agnieszka Burdzy, my wife, for discussing with me a number of philosophical problems related to this book.

I acknowledge with gratitude generous support from the National Science Foundation.

Seattle, 2015

Contents

<i>Preface</i>	vii
<i>About the Author</i>	ix
1. Introduction	1
1.1 Knowledge	1
1.2 Probability	2
1.3 Summary of the Main Claims	3
1.3.1 Resonance	3
1.3.2 Critique of frequency and subjective philosophies of probability	4
1.3.2.1 Positive philosophical ideas	5
1.3.2.2 Negative philosophical ideas	6
1.3.2.3 Innovative technical ideas	8
1.3.3 Scientific laws of probability	8
1.3.4 Statistics and philosophy	9
1.4 Historical and Social Context	11
1.5 Disclaimers	13
Philosophy of Probability	17
2. Main Philosophies of Probability	19
2.1 The Classical Theory	20
2.2 The Logical Theory	20
2.3 The Propensity Theory	22
2.4 The Subjective Theory	22

2.4.1	Interpreting subjectivity	23
2.4.2	Verification of probabilistic statements	24
2.4.3	Subjectivity as an escape from the shackles of verification	26
2.4.4	The Dutch book argument	27
2.4.5	The axiomatic system	29
2.4.6	Identification of probabilities and decisions	30
2.4.7	The Bayes theorem	30
2.5	The Frequency Theory	31
2.6	Summary of Philosophical Theories of Probability	33
2.7	From Ideas to Theories	34
2.8	Popular Philosophy	35
2.9	Is There Life Beyond Von Mises and De Finetti?	38
3.	Skepticism	41
3.1	How Do You Prove that You are Not a Camel?	41
3.2	Skepticism	42
3.2.1	Frustration of philosophers	46
3.3	Anything Goes	47
3.4	Von Mises' Brand of Skepticism	48
3.4.1	The smoking gun	49
3.4.2	Inconsistencies in von Mises' theory	49
3.5	De Finetti's Brand of Skepticism	51
3.5.1	How to eat the cake and have it too	52
3.6	On Approximate Theories	55
3.7	Temperature, Beauty and Probability	56
3.8	Latter Day Subjectivism	57
4.	The Frequency Philosophy of Probability	59
4.1	Collective as an Elementary Concept	59
4.2	Applications of Probability Do Not Rely on Collectives	61
4.2.1	Stochastic processes	61
4.2.2	Unlikely events	62
4.2.3	Graphical communication	63
4.3	Collectives in Real Life	65
4.4	Collectives and Symmetry	67
4.5	Frequency Theory and the Law of Large Numbers	68
4.6	Why is Mathematics Useful?	69

4.7	Benefits of Imagination and Imaginary Benefits	70
4.8	Imaginary Collectives	71
4.9	Computer Simulations	72
4.10	Frequency Theory and Individual Events	73
4.11	Collectives and Populations	74
4.12	Are All i.i.d. Sequences Collectives?	75
4.13	Are Collectives i.i.d. Sequences?	76
4.14	Martin-Löf Sequences	77
5.	The Subjective Philosophy of Probability	79
5.1	“Subjective” — A Word with a Subjective Meaning	80
5.2	The Subjective Theory of Probability is Objective	81
5.3	A Science without Empirical Content	83
5.4	If Probability does not Exist, Everything is Permitted	84
5.4.1	Creating something out of nothing	85
5.4.2	The essence of probability	86
5.5	De Finetti’s Ultimate Failure	88
5.5.1	Lazy decision maker	90
5.5.2	Interpreting Dutch book	91
5.5.3	Dutch book with a lapse of time	92
5.5.3.1	The butterfly effect	93
5.5.4	Rule of conditionalization	94
5.6	All Sequential Decisions are Consistent	95
5.7	Honest Mistakes	96
5.8	Cohabitation with an Evil Demiurge	98
5.9	Why Bother to Use Probability?	100
5.10	The Dutch Book Argument is Rejected by Bayesians	100
5.11	Insurance Against Everything	101
5.12	No Need to Collect Data	102
5.13	Empty Promises	103
5.14	The Meaning of Consistency	104
5.15	Interpreting Miracles	105
5.16	Science, Probability and Subjectivism	107
5.17	Apples and Oranges	108
5.18	Arbitrage	109
5.19	Subjective Theory and Atheism	110
5.20	Imagination and Probability	111
5.21	A Misleading Slogan	113

5.22	Axiomatic System as a Magical Trick	114
5.23	The Meaning of Subjectivity	114
5.24	Probability and Chance	119
5.25	Conflict Resolution	122
6.	The Logical Philosophy of Probability	125
6.1	Falsifiability	125
6.2	Why Do Scientists Ignore the Logical Philosophy of Probability?	127
6.3	Probabilities of Propositions and Events	128
7.	Common Issues	131
7.1	Law Enforcement	131
7.2	The Value of Extremism	133
7.3	Common Elements in Frequency and Subjective Theories	133
7.4	Common Misconceptions	134
7.5	Shattered Dreams of Perfection	136
7.6	What Exists?	137
7.7	Abuse of Language	137
7.7.1	Expected value	138
7.7.2	Standard deviation	138
7.7.3	Subjective opinions	138
7.7.4	Optimal Bayesian decisions	138
7.7.5	Confidence intervals	138
7.7.6	Significant difference	138
7.7.7	Consistency	139
7.7.8	Objective Bayesian methods	139
7.7.9	Prior	140
7.7.10	Non-informative prior	140

Epistemology **141**

8.	Epistemology	143
8.1	The Problem of Induction	143
8.1.1	An ill posed problem	144
8.1.1.1	On intuitively obvious propositions	146
8.1.2	Induction is a law of nature	147

8.1.3	Anthropic principle	148
8.2	Resonance	149
8.2.1	Information and knowledge	149
8.2.2	Resonance complexity	150
8.2.3	Facts	151
8.2.4	Learning resonance	153
8.2.5	Resonance level reduction	155
8.2.6	Properties of resonance	156
8.2.7	Physical basis of resonance	157
8.2.8	Information and knowledge revisited	159
8.2.9	Resonance and subjectivity	160
8.2.10	Raw resonance	161
8.2.11	Resonance and philosophy of Hume	162
8.2.12	Is resonance a new concept?	163
8.3	Consciousness	164
8.4	Intelligence	166
8.4.1	Artificial Intelligence	169
8.4.2	Social Context of Intelligence	170
8.5	Free Will	171
8.6	From Philosophy to Science	174
9.	Religion	177
10.	Science	181
10.1	Science as a Communication System	181
10.2	Some Attributes of Science	184
10.2.1	Interpersonal character	184
10.2.2	The role and limitations of resonance	185
10.2.3	Convergence to the truth?	185
10.2.4	Science control	186
10.2.5	Beyond simple induction	186
10.2.6	Science as a web	187
10.3	Science for Scientists	187
10.4	Alien Science	188
10.4.1	A lonely alien	189
10.5	Sources and Perils of Loyalty	190
10.5.1	Science as an antidote to manipulation	193
10.5.2	Dependent information sources	194

10.6	Falsificationism and Resonance	195
10.7	Falsificationism as a Religion	197
10.7.1	Sainthood in science	198
10.8	Technology	200
10.9	Multiple Personality Disorder	200
10.10	Reality, Philosophy and Science	202
10.11	Decision Making	204
10.12	Major Trends in Philosophy of Science	205
10.12.1	Real science — the big picture	207
10.12.2	Probabilism and Bayesianism in philosophy of science	208
10.12.3	Levels of philosophical analysis	210
10.12.4	Position of my theory in philosophy of science	211
10.13	Circularity	213

Science of Probability 215

11.	The Science of Probability	217
11.1	Interpretation of (L1)–(L6)	218
11.1.1	Events	218
11.1.2	Symmetry	219
11.1.3	Enforcement	221
11.1.4	Limits of applicability	221
11.1.5	(L1)–(L6) as a starting point	222
11.1.6	Approximate probabilities	223
11.1.7	Statistical models	224
11.1.8	The Bayes theorem	225
11.1.9	Probability of past events	225
11.1.10	Purely mathematical independence	226
11.1.11	Ruelle’s view of probability	226
11.2	Scientific Verification of (L1)–(L6)	226
11.3	Predictions	229
11.3.1	Predictions at various reliability levels	230
11.3.2	Predictions in existing scientific and philosophical theories	232
11.3.3	Predictions, conditioning and hypothesis tests	233
11.3.4	Prediction examples	233

11.3.5	Histograms and image reconstruction	234
11.3.6	Contradictory predictions	236
11.3.7	Multiple predictions	238
11.4	Symmetry, Independence and Resonance	242
11.5	Symmetry is Relative	243
11.6	Moderation is Golden	244
11.7	Applications of (L1)–(L6): Some Examples	246
11.7.1	Poisson process	246
11.7.2	Laws (L1)–(L6) as a basis for statistics	247
11.7.3	Long run frequencies and (L1)–(L6)	247
11.7.4	Life on Mars	248
11.8	Symmetry and Data	250
11.9	Probability of a Single Event	251
11.10	On Events that Belong to Two Sequences	252
11.11	Events Are More Fundamental Than Random Variables	253
11.12	Deformed Coins	254
11.13	Are Coin Tosses i.i.d. or Exchangeable?	256
11.14	Mathematical Foundations of Probability	257
11.15	Axioms versus Laws of Science	258
11.16	Objective and Subjective Probabilities	259
11.17	Physical and Epistemic Probabilities	260
11.18	Can Probability Be Explained?	261
11.19	Propensity	263
11.20	Countable Additivity	264
11.21	Yin and Yang	265
11.22	Are Laws (L1)–(L6) Necessary?	266
11.23	Quantum Mechanics	266
11.24	The History of (L1)–(L6) in Philosophy of Probability .	267
11.25	Symmetry and Theories of Probability	268
12.	Decision Making	271
12.1	Common Practices	271
12.2	Decision Making in the Context of (L1)–(L6)	272
12.2.1	Maximization of expected gain	272
12.2.2	Maximization of expected gain as an axiom . . .	275
12.2.3	Stochastic ordering of decisions	275
12.2.4	Generating predictions	278
12.2.5	Intermediate decision problems	279

12.3	Decision Making and Resonance	280
12.4	Events with No Probabilities	282
12.5	Utility	284
12.5.1	Variability of utility in time	284
12.5.2	Nonlinearity of utility	285
12.5.3	Utility of non-monetary rewards	287
12.5.4	Unobservable utilities	288
12.5.5	Can utility be objective?	288
12.5.6	What is the utility of gazillion dollars?	289
12.6	Identification of Decisions and Probabilities	290
13.	Frequency Statistics	291
13.1	Confidence Intervals	291
13.1.1	Practical challenges with statistical predictions	292
13.1.2	Making predictions is necessary	294
13.2	Estimation	294
13.2.1	Estimation and (L1)–(L6)	297
13.2.2	Unbiasedness — a concept with a single application	297
13.3	Hypothesis Testing	299
13.3.1	Hypothesis tests and collectives	300
13.3.2	Hypothesis tests and the frequency interpretation of probability	301
13.3.3	Hypothesis testing and (L1)–(L6)	301
13.3.3.1	Sequences of hypothesis tests	301
13.3.3.2	Single hypothesis test	302
13.4	Hypothesis Testing and (L6)	303
13.5	Hypothesis Testing and Falsificationism	304
13.6	Does Frequency Statistics Need the Frequency Philosophy of Probability?	304
14.	Bayesian Statistics	307
14.1	Two Faces of Subjectivity	307
14.1.1	Non-existence versus informal assessment	307
14.1.2	Are all probabilities subjective?	308
14.1.3	Conditioning versus individuality	308
14.1.4	Non-existent decisions	309
14.2	Elements of Bayesian Analysis	309

14.3	Models	310
14.3.1	Bayesian models are totally objective	310
14.3.2	Bayesian models are totally subjective	311
14.4	Priors	311
14.4.1	Objective priors	312
14.4.2	Bayesian statistics as an iterative method	313
14.4.3	Truly subjective priors	315
14.5	Resonance at Work	317
14.6	Data	318
14.7	Posteriors	318
14.7.1	Non-convergence of posterior distributions	319
14.8	Bayesian Statistics and (L1)–(L6)	321
14.9	Spurious Predictions	321
14.10	Who Needs Subjectivism?	322
14.11	Preaching to the Converted	323
14.12	Constants and Random Variables	326
14.13	Criminal Trials	328

Miscellanea 331
